## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

### ***Drawings***

2. The drawings were received on 7/29/05. These drawings are acceptable.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Yanagisawa et al (6,360,687).

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Yanagisawa et al teach a dry etching method for flattening a wafer including first removing a native oxide layer from a silicon wafer, which oxide is formed on the silicon wafer and then etching the exposed silicon by moving a nozzle relative to the wafer while supplying an activated species through the nozzle (col.1, lines 65-col.2, lines 1-20).

As to claim 4, Yanagisawa et al teach silicon oxide removing and etching exposed silicon are carried out in a vacuum chamber without breaking a vacuum of the chamber (col.13, lines 60-67).

As to claim 5, Yanagisawa et al teach that the speed of the nozzle during the oxide removal is constant as shows in figure 10 (col.12, lines 26-29) and the speed of nozzle for etching exposed silicon is variable depending on the relative thickness of the silicon wafer (col.10, lines 60-67).

As to claim 8, Yanagisawa et al teach the activated gas comprises fluorine radicals (col.14, lines 16-24).

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ezaki (6,381,300) teaches removing silicon oxide while substrate or nozzle is moving relative to each other (col.7, lines 16-32).

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
